## DETAILED ACTION

### *Election/Restrictions*

1. Claims 11-20 are withdrawn from further consideration pursuant to 37 CFR 1.142(b) as being drawn to a nonelected method, there being no allowable generic or linking claim. Election was made **without** traverse in the reply filed on 5/17/06.

### *Claim Rejections - 35 USC § 112*

2. The following is a quotation of the second paragraph of 35 U.S.C. 112:

The specification shall conclude with one or more claims particularly pointing out and distinctly claiming the subject matter which the applicant regards as his invention.

3. Claim 6 is rejected under 35 U.S.C. 112, second paragraph, as being indefinite for failing to particularly point out and distinctly claim the subject matter which applicant regards as the invention.

Claim 6 is indefinite because it is not clear what is meant by the phrase “comprises Pt and Co and other combinations of B, Cr, Co, Pt....and N.” For purposes of examination this has been interpreted to mean that the magnetic layer must include Co, Pt and at least one other element listed in the group of elements beginning with B. (thus, Co could be chose from this group of elements to arrive at a magnetic layer formed from only Co and Pt).

### *Claim Rejections - 35 USC § 102*

4. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

Art Unit: 1773

A person shall be entitled to a patent unless –

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

5. Claims 1-6 and 8-10 are rejected under 35 U.S.C. 102(b) as being anticipated by JP 2001-283428 (English machine translation attached).

JP 2001-283428 discloses a perpendicular magnetic recording medium having a substrate, a soft magnetic layer, a Ti or TiN seedlayer, a first RuCr layer containing at least 60 at% Ru and less than 40 at% Cr, a CoPtCrO granular magnetic layer thereon, a second RuCr layer having the same composition as the first and a second CoPtCrO granular magnetic layer thereon (see abstract and Fig. 7).

***Claim Rejections - 35 USC § 103***

6. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

7. Claim 7 is rejected under 35 U.S.C. 103(a) as being unpatentable over JP 2001-283428 in view of Bertero et al. (US 6893748).

JP 2001-283428 discloses all of the limitations of the claims as described above except for the use of a spacer layer between laminations of soft underlayers.

Bertero et al. disclose a perpendicular magnetic recording medium having a soft magnetic underlayer wherein the soft underlayer is formed from soft magnetic layers separated by a spacer layer.

Art Unit: 1773

It would have been obvious to one of ordinary skill in the art at the time of invention to substitute the multi-layered soft magnetic underlayer structure taught by Bertero et al. for the single layer soft magnetic underlayer taught by JP 2001-283428 in order to provide a medium wherein the length of transitions are narrower (see Bertero in col. 2, lines 10-63).

8. Any inquiry concerning this communication or earlier communications from the examiner should be directed to Holly Rickman whose telephone number is (571) 272-1514. The examiner can normally be reached on Monday-Friday 9:30-6:00.
